

Remote Sentry Portal

Custom Developed for Remote Sentry

Product Introduction

Our software has been exclusively configured for Remote Sentry devices to make managing your land efficient and effortless. The online portal is the home of all your devices. Once your Remote Sentry's are fitted, simply login from anywhere to view status, battery life, connectivity or latest data sets. You can also configure individual devices to make the most of our next-generation offering increasing operational efficiency, lowering maintenance and reducing costs.

Secure

Don't lose valuable data sets. Encrypted on device, transferred directly into the online portal and backed up regularly to the cloud.

Responsive Alerts

Sensors transmit status readings on event. Events timestamped, with configurable 3-Way alerts sent, to increase security at the users' sites.

Insightful

Bespoke online portal maps. View all unit statuses instantly and generate useful reports in a vast range of formats.

IoT for Everyone

Blending user experience with capability for a simple and insightful software system.

Personalised

Configure your units with unique or global scheduling through our bespoke online portal.

Integration

Azure & AWS supported. Data fed directly into other asset management systems if required.
